

Version 2.1

New possibilities and features of the CS 3 and CS 3+ (Item no.60226 and 60216) with software update 2.1

The following points are implemented for the CS 3 family with this update:

1. Addition of locomotive pictures of models from the latest innovations
2. Complementing the Märklin world of operation desks for new mfx+ models
3. Optimization of the properties and behavior of various components compared to the previous version 2.0.0. (1).

The last correspondingly comprehensive update brought the update to version 2.0. As is known, this included new equipment features such as the new control desk as an alternative to the TDCB desk, optimized setup and management of the article list, simplified setup of the switching functions, etc.

About this update 2.0. exists two important helpful documents. The German and English instructions on the CS 3 update page

<https://www.maerklin.de/de/service/downloads/cs3-updates/>

offered on this site as a download has been completely revised and now includes the new possibilities of this version 2.0. The other language versions on this page are currently being revised and will follow as soon as possible.

The new book with the article number 03083 is also commercially available. We beg your pardon but this book is actual only available in a German version. We hope that we can present an English version as soon as possible.

This update also includes the update for software version 3.112 of the MS 2. This is the latest software version and no longer the previous version 3.55.

We hope you enjoy exploring the new possibilities of your CS 3. You are welcome to send us farther any suggestions for extensions or changes for the CS 3/ CS 3+ to the email address service@maerklin.de.

Sincerely yours
Your Märklin customer service
